

GUIDE 1 OF 2 · DESKTOP

How to use Peak Paint OS.

The office side, one screen per page. Guide 2 covers the app the crew carry on site.

FOR THE TRIAL

Danny — work through it in order with a real job. Each page ends with the one question I want your answer to. Where it does not match how Peak actually works, write on the page.

Two front doors, one set of numbers.

You work in HQ on the desktop. The crew work in the app on their phones. Nothing is entered twice — what they mark off on site is what your reports and invoices are built from.

HQ · DESKTOP · THIS GUIDE	FIELD · PHONE · GUIDE 2

08 Reports & KPIs

THE ONE-LINE VERSION

Price from the rates library, let the crew mark off what they have painted, and the report, the claim and the invoice build themselves.

Three levels. Sign in as yourself.

HQ has its own sign-in, separate from the phone app. What you see depends on who signs in — a painter cannot open HQ at all.

THE HQ SIGN-IN

Only Admin and Foreman are listed. Each needs a 4-digit PIN, set in Settings → Crew & employees.

SAME APP, TWO MENUS

ADMIN

FOREMAN

The foreman menu has no Quotes, Tendering, Invoicing, Reports or Settings.

WHO GETS WHAT

LEVEL	CAN OPEN	CANNOT
Admin	Everything — quotes, tenders, invoicing, reports, settings	—
Foreman	Dashboard, projects, rates library, schedule, H&S, timesheets	Money & settings
Painter	The phone app only — Guide 2	All of HQ

BEFORE THE CREW START

- Settings → Crew & employees
- Set each person’s level: Admin, Foreman or Painter
- Give every Admin and Foreman a 4-digit PIN
- Blank PIN shows as “no PIN set” and lets anyone straight in

Your call, Danny: should a foreman see the rates library at all, or only the job and the hours?

Set these two up first.

Settings prints on every PDF the system makes. The rates library prices every quote, quick quote and variation.

SETTINGS → COMPANY DETAILS

RATES LIBRARY

CODE	ITEM	UNIT	BASE RATE (EX-GST)	LOADING FACTOR	CHARGE-OUT (LOADED)
WASH	Exterior wash · moss & mould Resene Deep Clean	m ²	\$ 3.5	Ground floor · ×1.00	\$3.50 incl GST \$4.02
				Sound / new · ×1.00	
PREP-INT	Interior prep · fill, sand, spot-prin incl. materials	m ²	\$ 6	Ground floor · ×1.00	\$6.00 incl GST \$6.90
				Sound / new · ×1.00	
PREP-EXT	Exterior prep · scrape, sand, gap incl. materials	m ²	\$ 9.5	Ground floor · ×1.00	\$9.50 incl GST \$10.92
				Sound / new · ×1.00	
PRIME-T	Prime bare timber Resene Quick Dry	m ²	\$ 7.5	Ground floor · ×1.00	\$7.50 incl GST \$8.63
				Sound / new · ×1.00	
STAINB	Stain block / seal Resene Sureseal	m ²	\$ 6.5	Ground floor · ×1.00	\$6.50 incl GST \$7.47
				Sound / new · ×1.00	
INT-CEIL	Ceiling · 2 coats Resene SpaceCote Flat	m ²	\$ 17	Ground floor · ×1.00	\$17.00 incl GST \$19.55
				Sound / new · ×1.00	

One line per thing you sell. Base rate is your cost-plus starting point; the loading factor produces the charge-out rate that quotes actually use.

Your call, Danny: are these the right rate lines and loadings for Peak, and is anything you price regularly missing from the library?

Build a quote from rate lines.

Quotes → **New quote**. Enter client and site, then add a line per rate code and type the quantity.
Nothing is priced by hand.

THE PRICED LINES

LINE ITEM	UNIT	QTY	RATE	TOTAL
Walls · 2 coats · \$22/m ²	m ²	210	\$22.00	\$4,620
Ceiling · 2 coats · \$17/m ²	m ²	140	\$17.00	\$2,380
Interior prep · fill, sand, spot-prime · \$6/m ²	m ²	210	\$6.00	\$1,260
Skirting / architrave · 2 coats · \$8/lm	lm	120	\$8.00	\$960

Quantity × charge-out rate = line total. Change a quantity and the totals move with it. First four of this quote's seven lines shown.

Subtotal	\$12,698
Discount	-\$0
Net	\$12,698
GST 15%	\$1,905
Total	\$14,603

Subtotal, discount, net, GST, total — live as you type.

THEN

- 1 Write the inclusions and exclusions in plain sentences
- 2 Download the quote PDF and send it
- 3 Set the status to *Sent*, then *Accepted* or *Declined*

Your call: does the quote PDF read the way you want a Peak quote to read, and are the standard exclusions the ones you use?

Accepted quote becomes the job.

The quote total becomes the contract value. From there the project header is the one place that shows where the job stands.

Job schedule · 14–25 Jul

Drag a bar to reschedule · drag its right edge to change duration

	14 MON	15 TUE	16 WED	17 THU	18 FRI	21 MON	22 TUE	23 WED	24 THU	25 FRI
PJ-1042 14 Marewa Rd · Whitfield	B1 · B4 14–17 Jul									
PJ-1035 21 Battery Rd · Harbourview			B2 16–22 Jul							
PJ-1031 3 Latham St · Chen	B3 14–15 Jul									
PJ-1039 8 Kennedy Rd · Ropati			B3 17–22 Jul							
PJ-1028 12 Thackeray St · Douglas						B1 22–24 Jul				

5 jobs · 4 crew · weekends hidden · changes are local to this prototype

Schedule — drag a bar to move the job, drag its edge to change duration. The crew initials on the bar are who sees it on their phone.

Your call: is a week-at-a-time board how you plan crew, or do you need a longer horizon?

Documents out, sign-ons back.

Write the task analysis for the site, generate the SWMS, and it appears on the crew's phones. Their sign-on comes straight back here.

Safety documents

+ Task analysis / JHA

+ SWMS

+ Toolbox talk

+ SSSP

TYPE	DOCUMENT	JOB	ITEMS	STATUS	UPDATED
TA · JHA	Working at height · exterior repaint 1 high-risk · 3 signed on	PJ-1042	4	Active	14 Jul
SWMS	Airless spraying · exterior 2 high-risk · not yet signed	PJ-1035	3	Draft	13 Jul

Tap a row to open & edit · issued documents show in the field app and the crew acknowledge them at sign-on.

Safety documents for the job — task analysis, SWMS, and the pack to download.

Today's sign-on log

NAME	JOB	SIGNED
The Bro #1	PJ-1042	Today 7:42am
The Bro #2	PJ-1042	Today 7:45am
The Bro #4	PJ-1042	Today 7:42am
The Bro #3	PJ-1039	Today 8:05am

Each sign-on acknowledges the active safety documents for that site.

Today's sign-on log — who signed, which job, what time.

- 1

Pick the hazards for this site from the hazard library
- 2

Generate the SWMS before day one
- 3

Check the sign-on log each morning
- 4

Download the pack when a client or main contractor asks

Your call: does this cover what Site Safe and your main contractors actually ask Peak for?

Extra work, priced and on the record.

The crew flag extra work from site with photos and a rate. It lands on your dashboard to price, approve or decline.

THE REGISTER FOR THE JOB

Variation claims			
AREA	DESCRIPTION	VALUE	STATUS
Kitchen / Dining	Gib repair to water-damaged wall before painting · flagged on site, 2 photos	\$450	Draft on site Send to client
Approved variations add to the contract sum and flow into the next progress claim automatically.			

Area, description, value, status. Approved values are added to the contract sum; drafts are not.

WHAT YOU DO WITH IT

- 1

Open the flagged variation from the dashboard
- 2

Check the photos and the rate, adjust the value
- 3

Approve or decline — approved ones show on the next report
- 4

Materials requests arrive the same way, tied to the job

What the crew fill in on the phone — area, description, a rate from your library, quantity and photos — is shown in Guide 2, page 05.

Your call: should a variation be sendable to the client for written approval before the crew start it?

Approve the week, then export.

Clock-ins arrive from the phones. Overtime past 8 h a day is calculated at 1.5×, vehicle km at \$0.83.

TOTAL HOURS

135.5

134 ord · 1.5 OT

LABOUR COST

\$5,375

wages + OT + vehicle km

CHARGED OUT

35 h this week

102% · -1 h left

Budget hours come off the quoted take-off, so overrun shows up mid-job — not at invoicing.

Actual hours against the hours you quoted, per job.

Your call: Export gives a payroll CSV, a job-cost CSV, the raw grid and a signed PDF. Which format does your payroll actually need, and are the cost rates and the \$0.83 km rate right?

Claim what the crew have marked off.

Send the progress report first, then raise the claim off the same percentage. The amount is worked out for you.

Invoice schedule				Raise progress claim · \$554
#	DESCRIPTION	AMOUNT	STATUS	
INV-01	Deposit · 10% on acceptance	\$1,845	Paid	
INV-02	Progress claim 1 · to 40%	\$7,380	Paid	
INV-03	Progress claim 2 · to 53% complete	\$554	Ready to raise	
INV-04	Final · on completion + variations	\$9,225	Not due	

The claim schedule for the job. **Raise progress claim** arrives pre-loaded with what is owed.

HOW THAT \$554 IS WORKED OUT	
Contract value	\$18,450.00
Complete, from the crew's capture	53%
Earned to date · 53% × \$18,450	\$9,778.50
Less already invoiced	−\$9,225.00
This claim, excl GST	\$553.50

OUTSTANDING \$23,340 3 invoices unpaid	OVERDUE \$2,400 1 follow up	PAID · MTD \$7,400 1 settled	DRAFT \$553 ready to raise
---	--	---	---

Invoicing across all jobs — outstanding, overdue, paid this month, and drafts ready to raise.

Your call: are your terms and retentions handled the way you need, and should approved variations be claimed separately or rolled into the progress claim?

Nothing here is typed in.

Every figure is built from the jobs, quotes and timesheets already in the system.

Revenue, gross margin, win rate, average job, jobs done, debtor days.

Revenue by month, drawn from invoices raised.

FIGURE	BUILT FROM
Contract value	accepted quote + approved variations
% complete	value-weighted average of each area's captured percentage
This claim	(% × contract value) – previously invoiced
Labour cost	hours × cost rate, OT at 1.5×, plus km at \$0.83
Debtor days	average days from invoice issued to marked paid

Your call: which of these six numbers do you actually run the business on, and what is missing?

Three things are worth more than a long list: what is missing, what is wrong, and what you would never use.

- 01 Are the rate lines and loadings right?
- 02 Does the quote PDF read like a Peak quote?
- 03 Is a week-at-a-time schedule enough?
- 04 Does the H&S pack satisfy your contractors?
- 05 Should variations go to the client for approval first?
- 06 Which payroll format do you need?
- 07 Terms, retentions and variation claims — right?
- 08 Which KPIs do you actually run on?
